Pollutants, Human Health and the Environment - Jane A. Plant 2012-02-08

Pollutants, Human Health and the Environment is a comprehensive, up-to-date overview of environmental pollutants that are of current concern to human health. Clearly structured throughout, the main body of the book is divided by pollutant type with a chapter devoted to each group of pollutants. Each chapter follows a similar format to facilitate comparison and discussion. For each pollutant, the authors describe the sources, pathways, environmental fate and sinks as well as known toxicological effects. Importantly, the second chapter on heavy metals and other inorganic substances deals with trace element deficiencies which can have serious problems for human health. Some rocks and soils are naturally low in some trace elements and intensive agriculture over the past half century has effectively mined many trace elements reducing their levels in soils and crops. The final chapter is a discussion about the various risk assessment frameworks and regulations covering the main pollutants. Comprehensive, up-to-date coverage of environmental pollutants of concern to human health Clearly divided into pollutant type with each chapter devoted to a different pollutant group Clearly structured throughout with the same format for each chapter to help facilitate comparison and discussion and enable readers to prioritise chemicals of concern Description of the sources, pathways, environmental fate and known toxicological effect Includes contributions from leading researchers and edited by a team of experts in the field

Information Technology Research, Innovation, and E-Government - National Research

Council 2002-06-03

Governments have done much to leverage information technology to deploy e-government services, but much work remains before the vision of e-government can be fully realized. Information Technology Research, Innovation, and E-government examines the emerging visions for e-government, the technologies required to implement them, and approaches that can be taken to accelerate innovation and the transition of innovative information technologies from the laboratory to operational government systems. In many cases, government can follow the private sector in designing and implementing IT-based services. But there are a number of areas where government requirements differ from those in the commercial world, and in these areas government will need to act on its role as a "demand leader." Although researchers and government agencies may appear to be unlikely allies in this endeavor, both groups have a shared interest in innovation and meeting future needs. E-government innovation will require addressing a broad array of issues, including organization and policy as well as engineering practice and technology research and development, and each of these issues is considered in the book.

Marxist Literary Thought in China - Paul G. Pickowicz 2018

Marxist aesthetic thought has dominated Chinese literary life for half a century, but little is known about how this distinctive Western school of thought came to be accepted. Paul G. Pickowicz fills in the gap, tracing the evolution of Chinese Marxist literary thought by focusing on Ch'u Ch'iu-pai, China's most important Marxist literary intellectual of the twenties and thirties. Ch'u and his contemporaries interpreted the writing of Marx, Engels, Plekhanov, Lafargue, Trotsky, Lenin, and Lunacharsky in ways that would answer important questions about the relationship between art and society, the moral obligations of the writer, the manner in which revolutionaries should perceive the literary treasures of the past, the impact of capitalism on artistic culture, and the nature of art in the socialist society of the future. Paul G. Pickowicz finds that Chinese writers responded to Marxism in a variety of ways. Some stressed voluntaristic themes, some emphasized deterministic elements, others, like Ch'u, attempted to synthesize conflicting strains. Moreover, the transition to Marxism did not constitute a radical break from the liberal traditions associated with the May Fourth literary revolution. Instead, leftist writers interpreted Marxism in ways that were compatible with their deeply ingrained May Fourth intellectual predispositions. Ch'u was the first to make a Marxist critique of the May Fourth generation of literary intellectuals and to analyze the failings of the leftist literary movement itself. His writings are of contemporary relevance for the issues he raised, such as the failure of leftist writers to place the revolutionary literary movement on a mass base. Ch'u's writings influenced the literary thought of Mao Tse-tung, and the issues Ch'u raised continue to be debated with emotion in China today.
